

The coast is one of the regions you in California. There is a northern and southern part of California coastal region. The northern part of coastal Region is cool and wet. The southern part of the California region is sunny and hot In conclusion, I hope that you will be able to visit the California coast .

Desert region

very hot so there is not a good chance that you will not see green plants.

Everything The dessert region can being is dead because it rarely rains and it is so hot.but it can also be a place that you see a lot of animals like

Bunnies and sometimes coyotes.

_Central Valley Is a very special place. These are reasons why Central Valley is special. First, it is very fertile. That lets crops grow better. Also, Central Valley is cool and wet in the Winter, while Summer is warm and dry. This makes it the perfect place to stay for a vacation. Another fact, is that central valley spreads from from Bakersfield to Vaudeville. Also it is close to the state capital, so you can go to the city.

boarders. A well known spot in the mountains is Yosemite. It is known for waterfalls, rivers, and forests. It is very cold in the winter, but it can get pretty hot in the summer. Mount Whitney has the highest point of Alaska. It stands at about 14,495 feet. This information was about the Mountain Region. Some mountains have been made by volcanoes from millions of years ago. Lava was oozing out from the volcanoes. Places in the mountains such as Mammoth, Lake Tahoe, and Big Bear all have a high enough elevation that they get the most snow in the state. All the snow from the mountains attracts skiers and snow
